DISCLAIMER

This Security Token Offering (“STO”) aims at raising funds to “tokenise” the assets of BoB Eco Ltd. located in different parts of the World. Most of the assets will be located and explored in African countries due to economic growth and the rising request for more logistical movement of people. The STO aims to tap into both the global base of liquidity allocated to Initial Coin Offerings (“ICO”) as well as regular investors in financial and capital markets. This STO also intends to be fully compliant with any and all KYC/AML and tax obligations and security regulations. Trading of the Tokens (as defined below) in the secondary market is expected to take place in the near future. For prospective purchasers, the STO further brings a unique opportunity to access - through a low-cost/tax- efficient structure - direct and innovative ways of using a Blockchain-based technology asset known as the “BoB Coin” (the “Token” - BOBC)

ELIGIBILITY

BoB Eco Ltd. (“Issuer”) is company incorporated under the Hong Kong Law, subject to the provisions and obligations related to Anti-Money Laundering (“AML”) and Know Your Customer (“KYC”) procedures of Hong Kong, namely, the Proceeds of Crime Law (Revised) and the Anti-Money Laundering Regulations (Revised).

LEGAL DISCLOSURES

This Whitepaper provides information in connection to an opportunity for the acquisition of a security token that will grant purchasers economic exposure to the lease contracts for individual Boda drivers / motorcycle taxis in areas where BoB Eco Ltd, and or its daughter companies are active including all related business coming from or necessary for the business as described in this whitepaper or on the website (www.BoB.eco). This Whitepaper does not constitute a prospectus, an offering memorandum and/or other offering document relating to the Issuer and has not been reviewed or approved by any financial regulator or securities commission in any jurisdiction. Investing in Tokens involves several risks. There can be no assurance that Token holders will be able to receive a payback of their capital or any positive returns on their purchase of tokens. Prior to investing in Tokens, prospective purchasers should carefully consider the “Risk Factors”, which despite not providing an exhaustive list or explanation of all the risks purchasers may face when investing in Tokens. Prospective purchasers should consider carefully whether a purchase of Tokens is suitable for them considering the information herein and their personal legal and financial circumstances. Unless otherwise indicated or the context otherwise requires, all references in this Whitepaper to “Issuer”, “we”, “our”, “ours”, “us” or similar terms refer to the Issuer.

FORWARD LOOKING STATEMENTS

This Whitepaper may contain estimates and forward-looking statements which are mainly based on the current expectations and estimates of future events and trends that affect or may affect the business, financial condition, results of operations, cash flows, liquidity, prospects and the envisaged valuation of the Tokens. Although we believe that these estimates and forward-looking statements are based upon reasonable assumptions, they are subject to many significant risks, uncertainties and are made in light of the current available information. Forward-looking statements speak only as of the date they were made, and we do not undertake the obligation to update publicly or to revise any forward-looking statements after we distribute this document because of new information, future events or other factors. Considering the risks and uncertainties described above, the forward-looking events and circumstances discussed in this document might not occur and future results may be materially different from those expressed in or suggested by these forward-looking statements. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause actual events or results, performance or achievements to differ materially from the estimates or the results implied or expressed in such forward-looking statements. These factors include, amongst others:

- A. changes in political, social, economic and stock or cryptocurrency market conditions, and the regulatory environment in the countries in which the Issuer conducts its businesses and operations;
- B. the risk that the Issuer may be unable to execute or implement its respective business strategy and future plans;
- C. changes in interest rates and exchange rates of fiat currencies and cryptocurrencies;
- D. changes in the anticipated growth strategies and expected internal growth of the Issuer;
- E. changes in the availability and salaries of employees who are required by the Issuer to operate their respective businesses and operations;
- F. changes in competitive conditions under which the Issuer operates, and the ability of the Issuer to compete under such conditions;
- G. changes in the future capital needs of the Issuer and the availability of financing and capital to fund such needs;
- H. war or acts of international or domestic terrorism; occurrences of catastrophic events, natural disasters and acts of God that affect the businesses and/or
- I. operations of the Issuer; and
- J. other factors beyond the control of the Issuer.

The Issuer disclaims any responsibility to update any of those forward-looking statements or publicly announce any revisions to those forward-looking statements to reflect future developments, events or circumstances, even if new information becomes available or other events occur in the future.

ACCURACY OF INFORMATION, NO CONSENT OF PARTIES REFERENCED IN WHITEPAPER

This Whitepaper includes technical, market and industry information and forecasts that have been obtained from internal surveys, reports and studies, where appropriate, as well as market and academic research, publicly available information and industry publications. Such surveys, reports, studies, market research, publicly available information and publications generally state that the information that they contain has been obtained from sources believed to be reliable, but there can be no assurance as to the accuracy or completeness of such included information. Save for the Issuer and its respective directors, executive officers and employees, no person has provided his or her consent to the inclusion of his or her name and/or other information attributed or perceived to be attributed to such person in connection therewith in the Whitepaper and no representation, warranty or undertaking is or purported to be provided as to the accuracy or completeness of such information by such person, and such persons shall not be obliged to provide any updates on said information. The Issuer has not conducted any independent review of the information extracted from third-party sources, verified the accuracy or completeness of such information or ascertained the underlying assumptions relied upon therein. Consequently, the Issuer makes no representation or warranty as to the accuracy or completeness of such information and shall not be obliged to provide any updates on said information.

TERMS USED

To facilitate a better understanding of the Tokens being offered for purchase by the Issuer, and the businesses and operations of the Issuer, certain technical terms and abbreviations, as well as, in certain instances, their descriptions, have been used in the Whitepaper. These descriptions and assigned meanings should not be treated as being definitive of their meanings and may not correspond to standard industry meanings or usage. Words importing the singular shall, where applicable, include the plural and vice versa and words importing the masculine gender shall, where applicable, include the feminine and neuter genders and vice versa. References to persons shall include corporations.

NO FURTHER INFORMATION OR UPDATE

No person has been or is authorised to give any information or representation not contained in the Whitepaper in connection with the Issuer and its business and operations or the Tokens and, if given, such information or representation must not be relied upon as having been authorised by or on behalf of the Issuer. The continuing sale of Tokens shall not, under any circumstances, constitute a continuing representation or create any suggestion or implication that there has been no change, or development reasonably likely to involve a material change in the affairs, conditions and prospects of Issuer or in any statement of fact or information contained in the Whitepaper since the date hereof.

Statements made in the Whitepaper are based on the law and practice at the date it was issued. Those statements are therefore subject to change should that law or practice change. Under no circumstance does the delivery of the Whitepaper or the sale of Tokens imply or represent that the affairs of the Issuer have not changed since the date of the Whitepaper.

Any applicants to the STO, either in a primary issuance or in the secondary market, will be subject to all applicable KYC/AML policies that may be in place at the time of the purchase, being subject to periodic assessment and routines in this regard. Failure to comply with the KYC/AML procedures and routines applicable to the purchase of Tokens shall prevent the purchase of the Tokens or the imposition of sanctions on purchasers, including the freeze of funds, mandatory cancellation or redemption of Tokens through our smart contract or any other measure that the Issuer may deem appropriate to meet the applicable regulatory requirements

OVERVIEW

The fundamentals of BoB Eco Ltd.'s assets started in 2017 when the founders started providing micro credits to individuals through Savings and Credit Co-Operatives (SACCOs) across emerging markets. With a focus on the African markets, the pair harnessed extensive experience as they served the small-and-medium scale markets and were further presented with a clear and proven opportunity to meet the large logistic needs of these emerging markets and their respective growing populace.

In Kampala (Uganda) where BoB Eco is already active, there are about 200,000 registered motorcycle taxis, popularly called Boda boda, Boda or Tuktuk. According to data collected from the United Nations Population Division, Kampala has an estimated population of 1,353,189 as recorded in 2019 and as such, this populace are in dire need of more motorcycle taxis, because it is the fastest means of movement amidst dense traffic, limited four-wheelers' routes and rough roads.

BoB (Blue Orange Boda) moved on to become a major participant in the Boda market of Kampala through the provision of leasable quality and highly-maintained motorcycles with the option of lease-to-own. The project wasn't just aimed at benefiting from a prosperous market but aligns with the Government's "Prosperity for All" (PFA) programme which was created to empower the low-income earners or poor populace in have a sustainable means of livelihood. Having successfully maintained operation for 4 years with 98.6% collected lease-fees, we are confident and proud to say that BoB has a strong foundation in the motorcycle taxi market, and now positioned to scale up at an accelerated pace.

Surprisingly, BoB has already kick-started its next phase of portfolio expansion which is poised to deliver an eco-friendly and sustainable motorcycle taxi solution to the ever-growing African markets. The company has also extended its partnerships to include auto-and-green technology manufacturers such as Green Bike HK and Suzuki who have already completed our first set of Electric Motorcycles and immediately invested in BoB's equity through the provision of 600 electric motorcycles and loading stations as part of phase one investment round. This non-cash transaction is part of the exclusivity contract between Supplier Suzuki who will exclusively deliver BoB motorcycles for Bob Eco to all African countries.

In a bid to raise more funds for larger asset acquisition and operations, BoB Eco is launching a Security Token Offering (STO) which relies on the blockchain technology for efficient and decentralised tokenisation of the company's assets and equity. This will further provide affordable opportunities to our project enthusiasts and current participants which includes our community of riders.

THE ECONOMIC ENVIRONMENT

Although electric motorcycles (e-motorcycles) are well-established in many parts of Asia, they are completely assessed as new products and innovations in Africa's emerging markets. To this end, this section will highlight the economic implications of delivering BoB Eco's e-motorcycles and operational standards to the target market.

SUSTAINABILITY

The company is positioned to adopt a technology and operational model that is driven towards green and sustainable innovations, yielding our new electric-powered motorcycles. Besides noise pollution, BoB Eco would be able to dramatically reduce fine particles and greenhouse gas emissions and improve the health standards of its market populace and region, as electric motors are non-polluting and 3-4 times more efficient than fuel motors. With our e-motorcycles and operational experience and testimonials from associated parties, advocates of greener economies will find BoB Eco as a more reliable and already-operating partner in implementing their goals of carbon-reduction and supporting the fight against climate change.

COST EFFECTIVENESS

The cost of recharging a battery is definitely less than the purchase of fuel (PMS). The difference in the cost of running these engines will attract more riders to opt for e-motorcycles, thereby increasing their income through reduction in running-cost. In terms of acquisition cost, BoB Eco already has an active lease-to-own business model which makes it possible for more participants to access BoB's motorcycles with the option of spreading purchase-payments across two years.

MAINTAINABILITY

From our years of operation in Africa, the management team further realised the need for motorcycles spare-parts due to the poor state of roads, and this has been considered to be a significant challenge in regions where BoB is active. Hence, the company moved on to collaborate with the most used motorcycle brand in the region which is the 1984 Suzuki AX 100 or successive models. For these motorcycles, riders can readily find spare parts at every street-corner of emerging markets in the Sub-Saharan.

SECURITY

The operations of motorcycle taxis in African markets do not exist without reports of criminalities, recklessness and other threats to human safety in the region. The coming of BoB and its mode of operation has helped in easing fears and suspicions targeted at motorcycle taxis riders. This is made possible through the implementation of extensive know-your-customer (KYC) strategies, giving us a community of responsible, business-oriented and educated riders. As we operate across multiple cities, we are sure to have evenly distributed risks with hard assets which can be followed and even recovered through our irremovable GPS systems mounted on every motorcycle.

EDUCATION

Educating the target populace of an available opportunity can go a long way in helping understand the impact of their contribution and range of benefit to expect. Also, education helps in building a stronger community around a specific product or service. The BoB Eco Programme will therefore, maintain transparency to help all investors learn the science of investing through lots of training presentations which will be offered in simple and various languages. These trainings and presentations will be given during planned webinars where each participant will be provided with clear explanations of available investment opportunities and processes offered by BoB Eco. Questions and requests will be entertained during the quarterly planned meetings which will be announced on the company's official website (www.bob.eco).

Our Current Market & Operations

One of the largest advantages of BoB Eco is its broad experience in the running of local SACCOs through which the founders have been providing "micro credits" since 2017. These Sacco's currently are daughter entities of Bob Eco Ltd. The outcomes of past operations have shown a clear and stable return of funds up to 98.6% of all provided loans. Through the first 4 years, we clearly discovered that the most profitable and impactful service offerings were loans provided for Boda riders. The provided loans were all paid back on time (reaching 98.6%) and we were able to help our customers generate prosperity and encourage new customers to start as individual Boda drivers as well.

We leveraged the chance of leasing motorcycles or Bodas as soon as we discovered the opportunity and were able to start a meaningful mission across disadvantaged areas where our offices are located. We truly brought an industry to live and stirred up the local economy with the anticipation of having new solutions to logistical needs spurred by economic growth. On the other hand, it is known that risk factors increase with expansion of service coverage as more participants or customers are coming on-board. Hence, it is important to mention that each individual lessee has 7 guarantors signing for its lease obligations and this makes it possible to diversify and offset risks.

The social impact of our services brings-in more motivation to the team and adds inestimable value to our operations across target regions, where we ensure that the welfare of host communities and disadvantaged areas are improved to a significant extent.

Our Expansion Projects

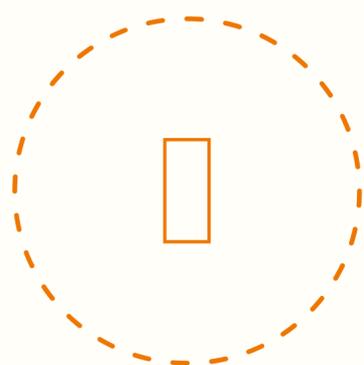

With its strategy and vision, BoB Eco is creating a new market for e-mobility in Africa by selling electric motorcycles on a lease-to-own model, completed with a full course for the owner to run a healthy business, as well as provide access to a developed app which will generate customers for the new entrepreneur. Alongside the expansion of its network of offices, BoB Eco also plans to build a network of solar charging stations.

To operate efficiently and stay competitive, drivers can lease motorcycles with a payment period of two years to reach full ownership. Affordable weekly fees, free battery recharging and free maintenance services are also put in place to significantly increase the drivers' revenue and demonstrate the value of our new products.

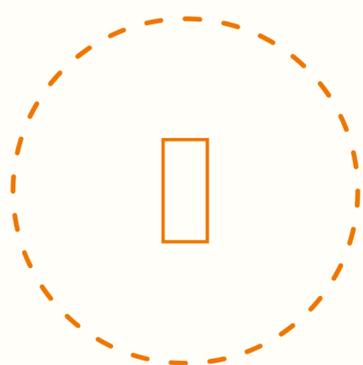

Together with its supplier Green Bike HK, BoB helped the R&D department of the Suzuki factory based in Shandong Province in China factory to develop a full electric version of the Suzuki AX 100 motorcycle, meeting all local necessities for which BoB received exclusivity in the African Market.

BoB Eco is also leveraging the Blockchain technology to optimally harness its ecosystem of distributed sustainable assets and bolster participation across the company's wealth-creation platforms. BoB Eco will further issue its security token to give participants the chance to own fractions of the company's overall portfolio.

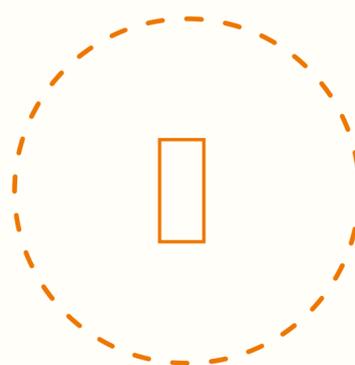

Already, our supplier the the Greenbike Ltd has become the first participant of our Token program by acquiring BoB tokens through offering, together with the Suzuki factory, the first 600 motorcycles and loading stations in a non-cash transaction are full-filled in phase 1 bringing our total number of BoB motorcycles over 1.000.

Equity Participation Through Asset Tokenisation

BoB Eco Ltd. is offering the public an opportunity to establish a sustainable passive or active investment portfolio through the acquisition of the company's equity as represented in its security token or coin. With the adoption of Blockchain technology, BoB Eco is given the ability to tokenise its broad assets and equity to deliver affordable and instantaneous fractions, improving participation and making the path to success more transparent and easier for all members of the company's ecosystem. The BoB Eco Programme is being launched to transparently help all investors learn the science of investing accompanied by lots of trainings and presentations which will be delivered in simple and understandable languages.

SECURITY TOKENS

A Blockchain is a decentralised and immutable public database of transactions. The database is organised by connecting a chain of blocks together where each block contains a group of transactions and the blocks are ordered chronologically and linked together, using cryptographic hashes. Large quantities of computational resources must be expended to create each block, and each one contains the previous block's hash to establish a chain.

One of the earliest uses of a Blockchain was in the creation of Bitcoin. It was the first digital currency following the ideas set out in a whitepaper written by Satoshi Nakamoto. Bitcoin's Blockchain maintains a complete ownership history of every of its cryptocurrency unit ever created and uses different computer technologies - developed over the years - to guarantee its safety. The underlying Blockchain technology enabled highly-efficient transactions to take place between pseudo-anonymous individuals. For the first time in the digital realm, people could place their trust in technology when transacting, rather than turning to an intermediary.

After the popularisation of Bitcoin (mainly related to its price increase during the years of 2014-2017), hundreds of start-ups have emerged using Blockchain in a variety of new and innovative ways. Examples include: (i) facilitating bank settlements, (ii) creating markets for unused computer resources, and (iii) prediction and wagering platforms. One of the most widely used projects based on the Blockchain technology is Ethereum9, which uses a concept of virtual quasi-Turing machine called the EVM (Ethereum Virtual Machine), and a high-level programming language - called Solidity - to facilitate the creation of smart contracts.

Entrepreneurs then realised that if they coupled Blockchain technologies with smart contracts, they could build decentralised applications (Apps) for all types of processes. In order to fund development of these Apps, developers had to setup fundraising programs that enable the issuance of non-asset backed cryptocurrency or digital tokens, designed to be utilised on the App itself or in an ecosystem or platform created by the developer as "utility tokens". This form of fundraising was termed an Initial Coin Offering (ICO). However, as several ICO projects have failed to deliver or have been tarnished by people with bad intentions,, the demand for utility tokens has decreased. Instead, consumers are now looking for tokens with real substance for their digital investments. As a security token offering or STO offers a token with the promise of a return (by way of profits, assets or both) as opposed to the promise of utility, purchasers of such tokens are better protected from project failure or fraud.

THE BOB COIN (BOBC)

The BoB Coin (BOBC) is a security token embodying a defined equity capital participation share of that moment and the future profits and assets. The innovative model of The BoB Coin Program brings the best of both worlds, combining the flexibility and freedom of a distributed Blockchain-based asset simultaneously with tangible real-life businesses.

BoB Coin has been designed and developed as a real-business equity capital participation share token of BoB Eco Ltd. By doing so, the BoB Coin Program resolves an essential deficiency in the crypto-world by offering potential holders a better-defined and more predictable future income stream from the company's existing business, as well as various projects capitalised into a digital financial instrument.

All existing assets were transferred directly or indirectly through full daughter companies owned by BoB Eco Ltd. as existing assets. The financial resources raised under the project are now being used to expand the existing assets. Because of the equality of the number of shares and coins as well as the equality of the assigned rights, the number of BOBCs reflects a proportionately corresponding share to the holder of the coins in the assets or equity of BoB Eco Ltd.

The core reward to BOBC holders is the income from dividends, together with the significant potential for capital gains, as a result of the business growth from the advancement of funded Boda Riders, and unprecedented mobility as well as liquidity of the crypto instrument through the BoB Eco Program proprietary platform and expected listings.

With a minimum investment amount of 100 US Dollars, our BoB Coin program is positioned as a unique opportunity to purchase coins/tokens of already existing assets. It is an easy way to purchase, hold, receive possible dividends, and gain profits from the value fluctuations of BOBC. Besides the accessible minimum investment there are more benefits as highlighted below:

ASSET-BACKED TOKEN

BoB Coin is an asset-backed token in a market currently dominated by tokens lacking intrinsic value. Hence, BOBC is poised to take the lead in what the world considers the future of investments and wealth generation.

SUSTAINABLE TOKEN

BOBC is an evergreen vehicle that allow the company reinvests all or a large part of the cash flow from operations into new opportunities. More interesting is the fact that our solutions are driven toward sustainable innovations as reflected in our green motorcycle project.

LIQUIDITY

There cannot be a secondary market within the framework of a private offer of securities, still, people can sell tokens on their own through P2P transactions. At the inception of the STO, no secondary market trading of the Tokens will be available, however, we intend to create a marketplace with strategic partners to provide Token holders with the ability to exchange their assets, thus potentially increasing liquidity.

VALUE-DRIVEN TOKEN

Over time, it is expected that BOBC reflects the appreciation of the fair value of the Target Assets. This will become more evident as soon as secondary trading is available.

OUR SECURITY TOKEN OFFERING (STO)

Our STO will be based on an audited smart contract generating the requisite tokens (RBZ). Purchases will be made in crypto-assets, either ETH or Stable Coin. Our Token will rely on the widely used Ethereum Network and the ERC2011 standard protocol, the most established Blockchain-based smart contract technology to date. The use of ERC20 in the creation of digital tokens has been proven to be efficient as confirmed through other STOs. By relying on the Blockchain technology, BoB Eco Ltd. aims to eliminate several bureaucratic procedures and increase cost-efficiency as compared to general costs derived from financial investment programs. It is important to emphasise that, in contrast to many ICOs, the funds raised during the STO will not be retained by the company (BoB Eco) and shall be used to invest into Target Assets in accordance with the Fund Distribution Plan. Every investor that is purchasing our security token (BOBC) gets a unique opportunity to become a co-owner, token/coin-holder of BoB Eco Ltd. and therewith becomes a co-owner of thousands of "individual independent Boda driver companies", who operate in multiple cities and areas across multiple countries.

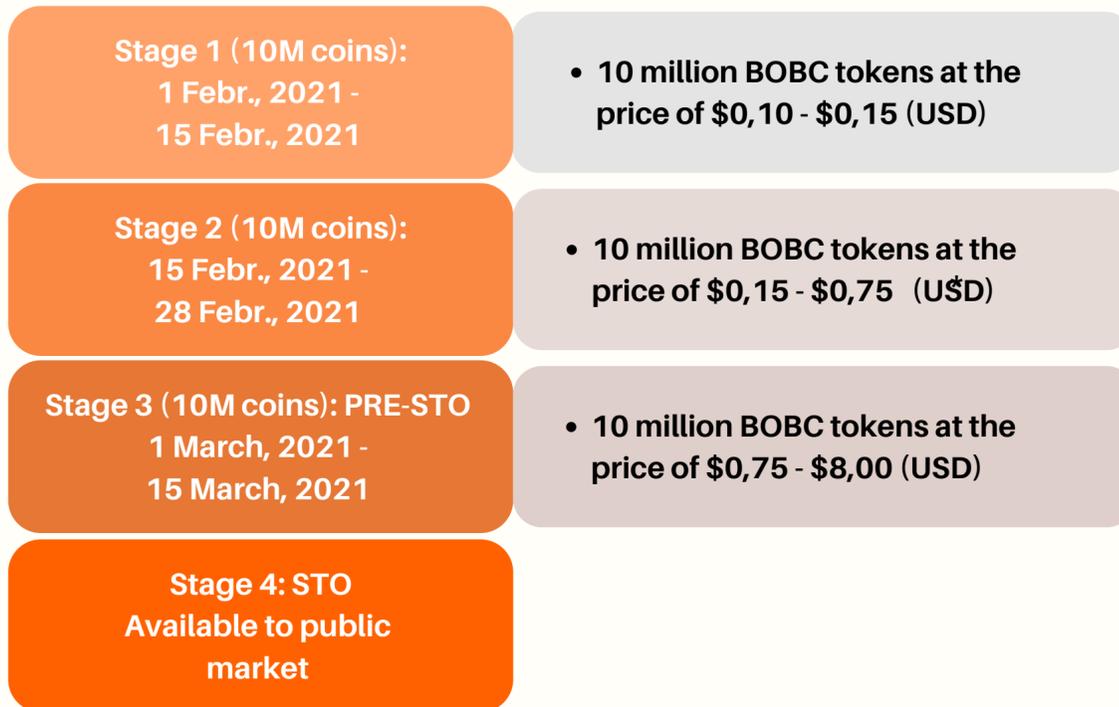

TOKEN SALES & DISTRIBUTION PLAN

Through a notarised agreement one token is made equal to one share of BoB Eco Ltd. and grants equal rights to a BoB Coin as to shares or One token is equal to one share of BoB Eco Ltd.

A total of 100 million BoB Coin tokens (BOBC) is set to be issued - 100,000,000 is equal to the total quantity of Company shares of BoB Eco Ltd.

SALES SCHEDULE

The 100 million BoB Coin tokens (BOBC) will be issued in 10 stages:

After each stage, a maximum balance of 10 million tokens will remain at the disposal of the final beneficiaries. From 15 March, 2022, a maximum of 10 million BOBC tokens will be made available to the market on each six months at prices that correlate with the market value, due to the decision of the final beneficiaries and the board of directors of BoB Eco.

**Due to the strong organic growth of the balance we take a relatively large price range into account while we plan 6 months periods per fase.*

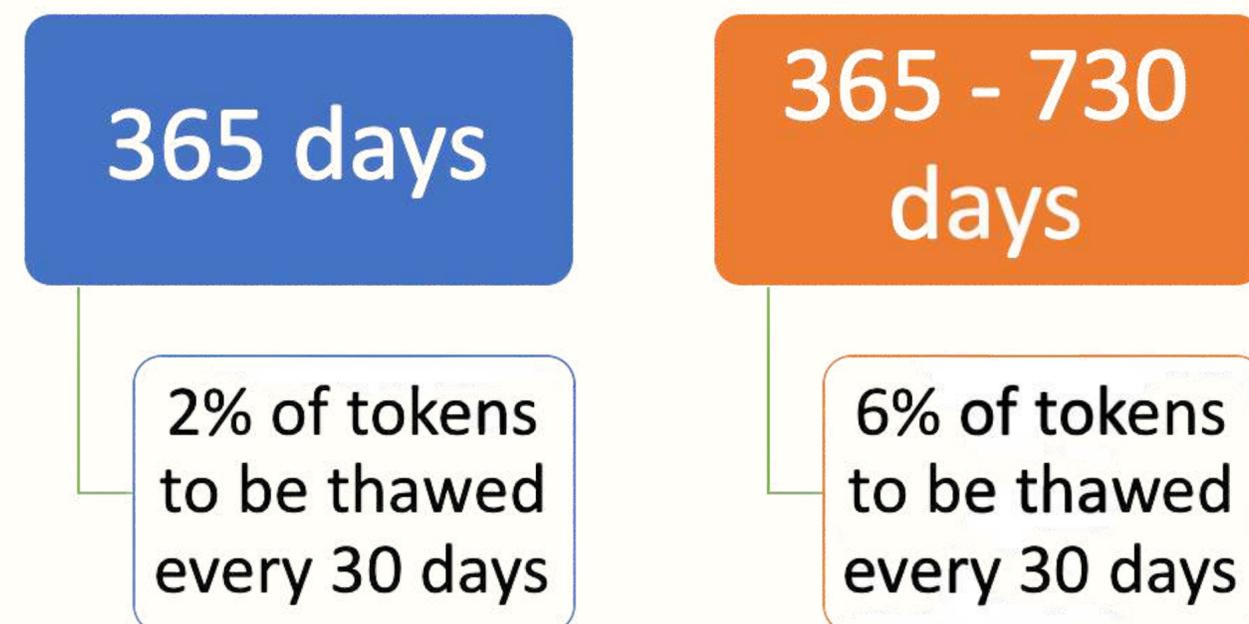

TOKEN STATES AFTER PURCHASE

Upon the initial purchase of BOBC, the tokens will be frozen for 365 days, then on a monthly basis - starting from 2% per month, the tokens are thawed, and then go into free circulation. Hence, the BoB Coin can be in the following 3 states:

1. Liquid token (can move freely between accounts) Normal state
2. Frozen token (immediately after the purchase, the tokens are in the state of the frozen token and then defrost on schedule)
3. The thawed token is laid down for Staking to receive passive income (programem in development)

Defrosting BOBC is carried out according to the following schedule:

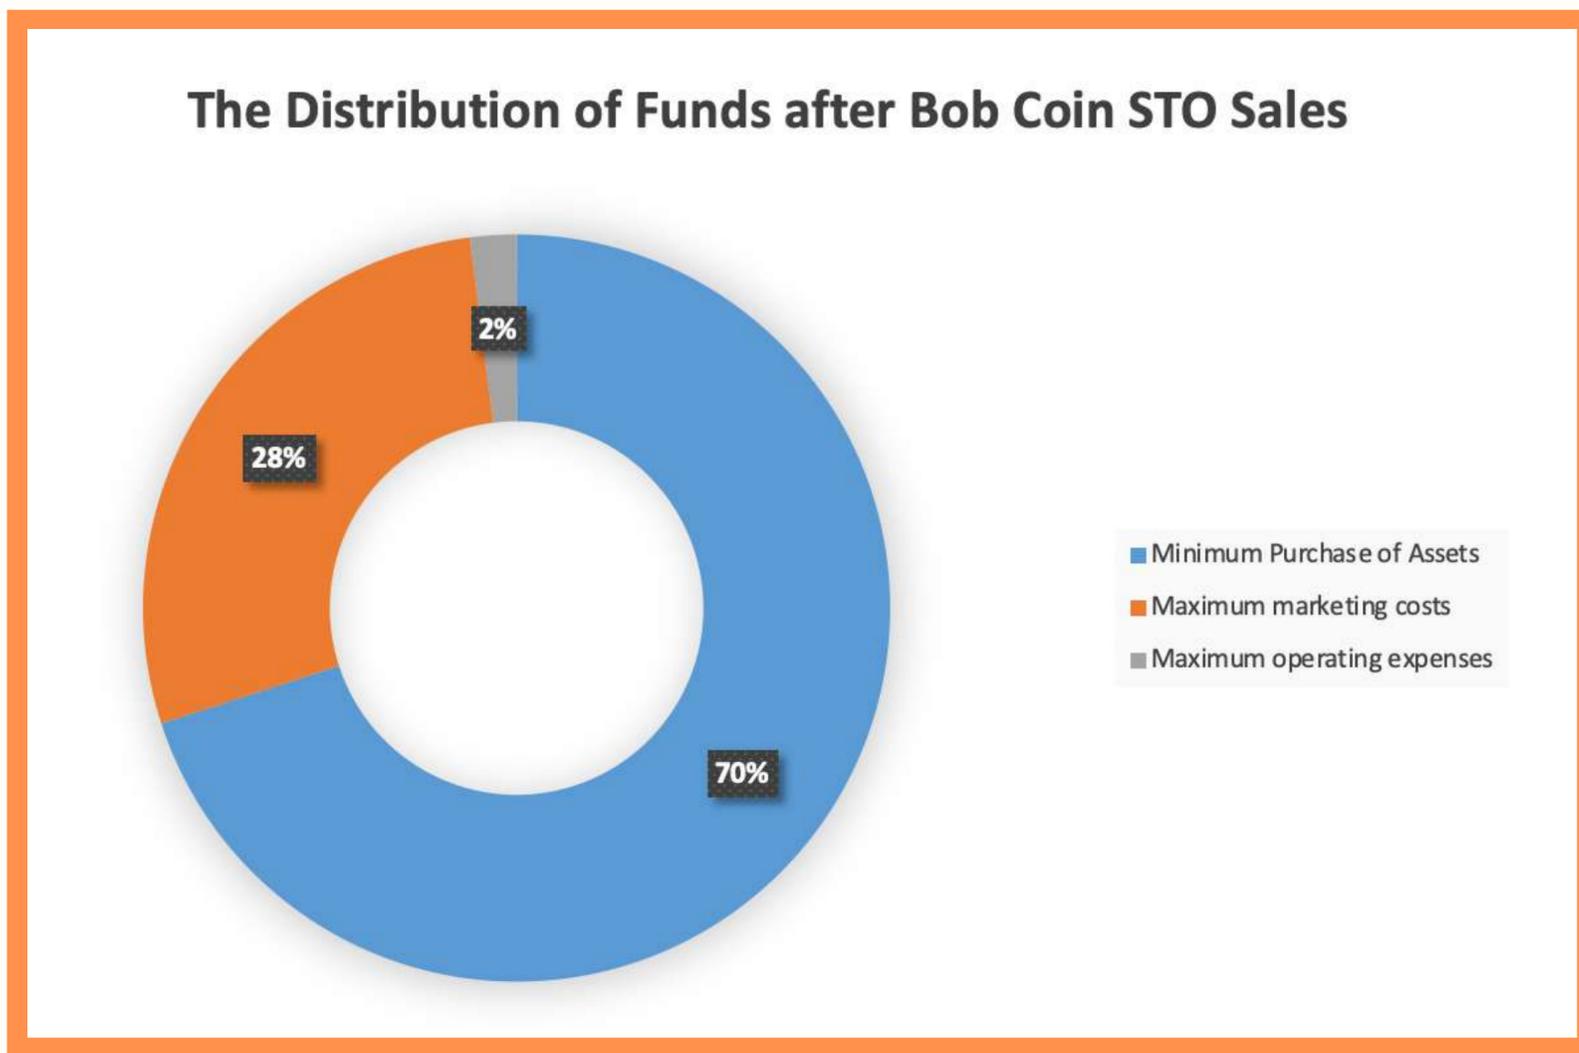

Each individually committed purchase or marketing charge is thawed.

The free circulation of the token with fiat currencies and other cryptocurrencies is planned through STO exchanges or by means of P2P exchange.

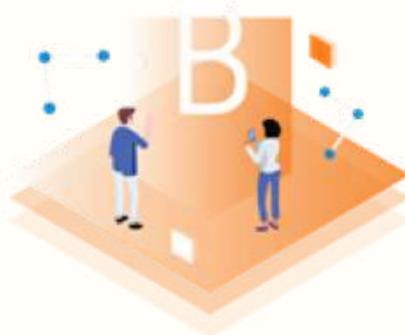

A participant of the program will be able to sell all defrosted BOBC on a crypto-exchange and the program is also planning to create the possibility of staking. The participant is then able to put them in a stake on the Blockchain to receive additional passive income besides the planned dividend paid by Bob eco ltd to it's participants.

STO FUND DISTRIBUTION PLAN

THE BOB TOKEN PLATFORM

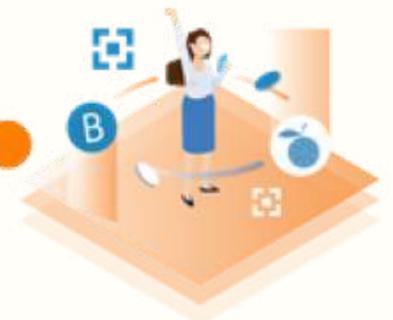

To ensure that our token holders have an advanced experience of the crypto-market and its associated benefits, we have designed the BOB digital platform that offers safe token storage, P2P transactions, Future real-time staking capabilities (still to be developed), communities engagements, and the opportunity to trade on external exchanges.

BoB Coin Market Position Strategy

We intend to keep our operations transparent and as such, build more trust for current and prospective participants which will bolster our market position and make us a point of reference for genuine investment in the crypto-and-green world.

To this end, token holders will vote in majority to determine the percentage of profit payable on dividends per 6 months, giving them absolute power as a community with common interests and goals.

AFFORDABILITY

BOBC is set to become the token for all, as it provides individuals the opportunity to actively benefit from a broad portfolio through the acquisition of an affordable fraction of shares.

REFERRAL PROGRAM

In addition to the chances offered by entering the BoB Coin program with smaller amounts, each participant can also enlarge their participation (number of coins) by inviting other people. In this way, participants can receive bonuses in extra coins or cash, calculated through the size of transaction carried out by the new participant.

Furthermore, the referral program will bolster P2P enlightenments and enable the company reach more prospective-participants, presenting beginners to experienced investors with an offering that suits their needs.

PHYSICAL AND VIRTUAL TRAININGS

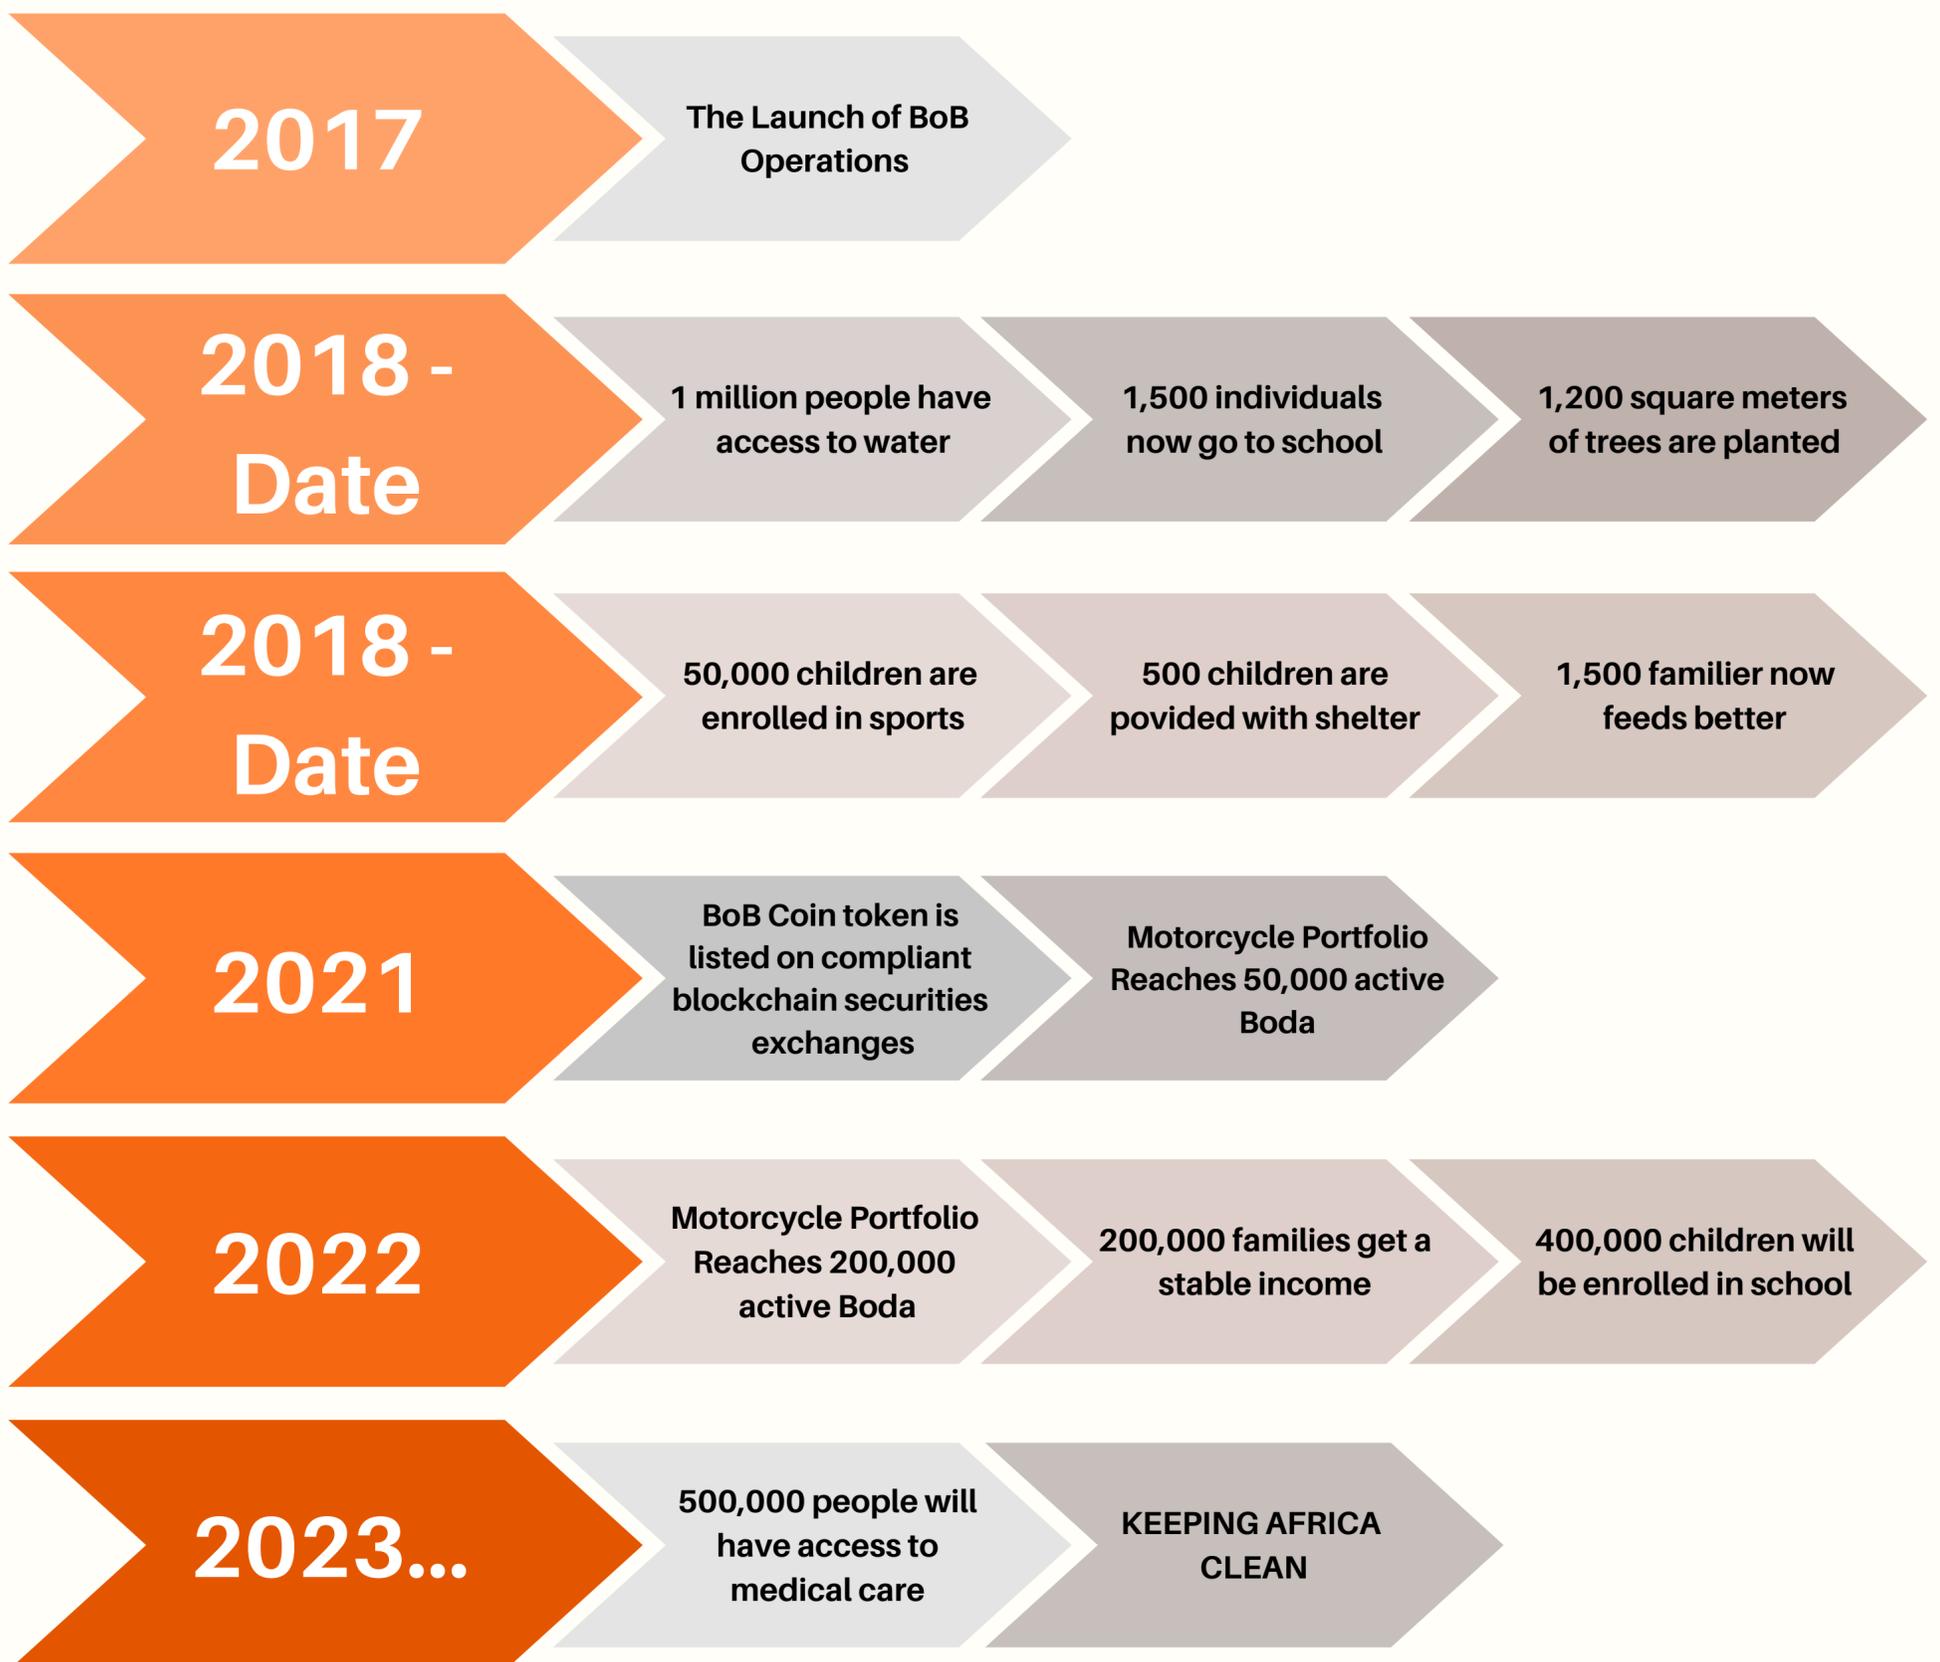

BoB Eco will give good attention to both physical and virtual trainings or meetings, as the company rely on feedbacks for future developments and decision-making. These trainings and presentations will also be given during planned webinars with clear explanations. Questions and requests will be handled during the quarterly planned meetings where every participant can join virtually.

COLLABORATIONS OR PARTNERSHIPS

BoB Eco will give good attention to both physical and virtual trainings or meetings, as the company rely on feedbacks for future developments and decision-making. These trainings and presentations will also be given during planned webinars with clear explanations. Questions and requests will be handled during the quarterly planned meetings where every participant can join virtually.

ROADMAP

To keep track of our achievements and coming milestones, we always maintain a roadmap that serves as a guide for driving our efforts and resources. Below is a summarised representation of BoB Eco roadmap in-line with our social impact:

THE FUTURE

The BoB Coin program is at the heart of our business ecosystem, hence, this tool gives our communities the opportunity to become a co-owner of a portfolio of independent drivers or proprietors, which at the start of the listing has an independent valuation of more than 150 million US dollar.

The current valuation is based on the autonomous growth of the company's current assets in the first six months after the organised and already fully underwritten (sold out) pre-STO phase 1 and 2. With the first 2 phases being sold out in both cash and non-cash transactions, BoB Eco is given the opportunity to allow its assets and income organically grow at a rate of over 15% per month.

With the opportunity to have at least 50,000 active Bodas in 2021, we now aim to reach a Target Asset Level of \$ 1,000,000,000 or more within 2 years.

With millions of motorcycle taxis active in Africa, the market potential for electric motorcycle taxis is enormous and unlimitedly scalable. The sector is on the verge of exponential growth as public authorities recognise the critical role e-mobility plays in climate resilience and as companies validate the game-changing impact of PAYG (Pay-As-You-Go) on productive use equipment.

BoB Eco further intends to fund as much people as possible (in compliance with our proven financial requirements) in disadvantaged areas to start as "Independent Boda Riders", through the support of the crypto community.

The members of the crypto community on the other hand, who participate (in) directly and transparently will receive income streams and capital gains from the funded riders through BoB Eco Ltd.

CONCLUSION

Investing in an already-operating business venture is the most convenient move for lots of investors due to the assurance of profit, however, the cost of such investments will make it an impossible choice for low-income earners.

BoB Eco Ltd. has broken this barrier with the adoption of Blockchain technology which it used in tokenising its equity to provide affordable investment opportunities to individuals and partners from different economic environments.

The drive towards sustainability remains a core objective of all our projects and with the introduction of our new electric motorcycles, maintenance and leasing services across the African markets, we are certain of rapidly growing our current offerings across these market into a resilient wealth empire on the global market.

In general, we consider our program as a unique opportunity for everyone to become a co-owner or shareholder in multiple countries' operational social company who combines charity, eco-investing, positive economical drive, and a large economic growth to develop great opportunities for small, middle and large investors around the world. Simply put, BoB Eco Ltd. offers investments opportunities with high profitable chances but with a green and charitable approach.

AN EXPERIENCED TEAM

BOB ULTEE

Serial Entrepreneur, inventor, author, and co-founder of BoB Eco Ltd.

He is the author and creator of the BoB Eco Programme, the BoB Community, and BoB entrepreneurial courses for independent BoB Boda Businesses.

Bob is a dream master, multi-disciplinary professional investor and businessman. He is also a Finalist of Ernst & Young "Entrepreneur of the Year Election" and first entrepreneur who made a reverse listing on the EURONEXT (Dutch Stock Exchange) in 20 years.

He remains a Bestselling Author, appreciated lecturer, bespoke businessman with more than 25 years of business experience in multiple business fields.

BJORN DE JONG

Head of R&D at BoB Eco Ltd.

Living in China since 2006, he is the head of development for the optimisation and electrification of the Suzuki AX 100 Motorcycle project. He oversees the activities of the research and development group, ensuring the R&D budget objectives are met, while maintaining a strong and competitive consumable innovation portfolio.

RIEN KORNEGOOR

Head of Expansion at BoB Eco Ltd.

Working from numerous African countries since 2017, he is in charge of expansions and ensures the rapid growth of our portfolios in emerging markets. He also directs and coordinates business and departmental activities across production, pricing, sales, or distribution. Rien further oversees administrative activities directly in relation to making products or providing services, preparing staff work schedules and assigning specific duties.

Investment Risks

The company provides not only any guarantees with respect to value growth but also on world exchanges. The company does not guarantee that the use of BOBC, BoB Coins or BoB tokens will meet the requirements of the user, which will be continuous, accessible at any time, safe and error-free. Any links to third-party sites cannot be approved by the Company for any products, services or information presented on them. The company does not guarantee the accuracy of the information provided on such sites. In addition, the Company should not control user agreements and privacy policies of third- party sites.

RISK FACTORS RELATING TO LEGAL AND REGULATORY FRAMEWORK

The risk of the Customer incurring financial losses due to the entry into force of new or changes to existing regulations. Legal risk also includes the possibility of the Investor incurring financial losses due to the absence or ambiguity of regulatory acts directly or indirectly regulating activities in the securities market.

Investments in crowd investing projects are associated with a high level of risk, this Notice describes the most common types of risk, their list, however, is not exhaustive.

ECONOMICAL RISKS

The Company is not liable for losses incurred by the Client as a result of economic risks:

- 1.1. Price risk - the risk of the Investor incurring financial losses due to adverse changes in the prices of financial instruments and investment items.
- 1.2. The instability of financial markets - a decrease in the liquidity of financial instruments, items and objects of investments and the impossibility of their implementation.

LEGAL RISKS

The risk of the Customer incurring financial losses due to the entry into force of new or changes to existing regulations. Legal risk also includes the possibility of the Investor incurring financial losses due to the absence or ambiguity of regulatory acts directly or indirectly regulating activities in the securities market.

TECHNICAL RISKS

1. The client assumes the risks associated with malfunctions of software, telecommunication equipment and other technical problems;
2. The client is obliged to store passwords and be sure that third parties will not get access to the Personal Account;
3. Any user should take care of the safe storage of their private keys from crypto-wallets, since there is a risk of theft of account data and the transfer of tokens without permission.
4. The client is aware that the information transmitted in unencrypted form (via e-mail, instant messaging service) is not protected from unauthorised access.

RISK OF FALSE

When buying tokens, it is possible that a third party can impersonate a token issuer and provide a fake cryptocurrency address to steal cryptocurrency or fiat funds from the buyer.

The user must request the latest information about the services from the developer of this Blockchain.

FORCE MAJEURE CIRCUMSTANCES

The Company is not liable for losses incurred by the Client as a result of force majeure circumstances: military operations, terrorist acts, natural disasters, foreign exchange interventions, decisions of authorities and management and other circumstances related to force majeure.
